

Smart in Everything but School? **A Vision-Reading Link?**

About 20 percent of children have vision problems that make reading very difficult. Their ability to focus, aim, track, or scan a line of print is not up to the hard work of reading. All of these visual abilities, plus critical visual processing skills must work well for reading to be fast, efficient, and fully comprehended.

In this workshop on vision and reading, you will learn about how to test for and identify vision related learning disorders as well as new treatment options and current research.

Speaker: Dr. Barry Tannen
 Developmental Optometrist

Wednesday May 15, 2019

Mercer County Education Association
 3131 Princeton Pike, Bldg. 4A, Suite 201
 Lawrenceville, NJ 08648
